

ISIT307 S3, 2026

Assignment #2

Due: 14/08/2026 8pm

Marks: 25 marks (25%)

The purpose of this assignment is to create interactive web site by using Object-oriented PHP and MySQL Database.

Aims

In this assignment, you will need to develop a dynamic website - web application “MyRecordingStudio”.

The “MyRecordingStudio” offers recording studio spaces equipped with audio-visual (AV) equipment across multiple locations. Each location has a limited number of studios, which can be booked by clients for designated time slots. All locations operate daily from 10:00 a.m. to 10:00 p.m., and bookings may be made for durations ranging from 1 hour to 12 hours.

There are two types of users: *Administrator* and *Client*. Both types of users should have options to register, login and logout into the app.

The *Client* should be able to book a studio for a specific session (time slot) by entering the booking date, start time, and session duration. The app should ensure that the session end time does not start before 10 AM and do not extend beyond 10:00 PM. Once a booking is successfully made, the *Client* should receive a confirmation note that includes the booking details and the total cost. The *Client* should be able to modify or cancel an existing booking, but only if the session has not yet started; once the start time is reached, no changes or cancelations are permitted. Additionally, the *Client* should be able to: View a list of all locations with available studios, Search for a specific location, View (as a list) all previously completed studio sessions, View (as a list) all current and future booked sessions.

The *Administrator* should be able to create and edit studio locations. The Administrator should be able to create, modify, and cancel studio booking sessions on behalf of a specific client. In addition, the *Administrator* should be able to Search for a specific location, View a list of all locations, View a list of locations with available studios, View a list of locations where all studios are fully booked, View a list of all registered clients, View a list of clients who currently have an active booking (i.e., clients who are currently using a studio).

For every user (*Administrator* or *Client*) there should be information about: ID (unique ID), Name, Phone, e-mail and Type.

For every location, there should be information about: LocationID (unique ID), Description, Number of recording studios, Cost per hour.

The Search options can be done by a combination of different fields (e.g. LocationID, Description). The user should be able to search by entering only part of the search term.

Entered information needs to be validated in the PHP script.

The payment is not part of this assignment (the provided solution should not have that functionality).

Requirements

1. Design Requirements

The website should have interfaces for:

- Registering/Login the users;
- Create/Modify location;
- Create/Modify/Cancel booking;
- Search location(s);
- List locations;
- List clients.

2. Functionalities

- Both types of users should be able to register into the app;
- Both types of users should be able to login into the app;
- Both types of users should be able to logout;
- Both types of users should be able to search locations;
- The *Administrator* should be able to create/modify location into the app;
- The *Administrator* should be able to create/modify/delete studio booking sessions;
- The *Administrator* should be able to list: all locations, locations with available studios, locations with fully booked studios;
- The *Administrator* should be able to list: all clients, all clients currently using a studio;
- The *Client* should be able to make a booking (with notice/info for the booking date/time and charging costs);
- The *Client* should be able to modify/cancel a booking;
- The *Client* should be able to list: all locations with available studios, all previously completed studio sessions, all current and future booked sessions.

3. Other Expectations

- The students should use classes and create database with tables based on the requirements of the assignment;
- The web application should have good interfaces and navigation through the given options.

Submission

1. Prepare a report that has a header:

My name:
My student number:
My email address:
Assignment number:

any requirements, remarks, or readme for your web site. The report should also include the list of the web site's files, a brief description for each file and class, a short description of the database tables and a user manual describing how the system works in fulfilling all the requirements with screenshots.

2. Submit a ZIP file containing all assignment files and your report (in .pdf) over Moodle submission link.
3. You are not required to submit a hardcopy of the report, nor copy out all the source code. Make sure you have included all the information need, so your solution can be run in a browser.
4. Remember to submit the database sql script.
5. The students should present their solutions to the tutor during the next lab session.

NOTES:

1. Submit your assignment before the due date. Penalties apply to all late work, except if student academic consideration has been granted. Late submissions will attract a penalty of 5% of the assessment mark. This amount is per day including weekends. Work more than 4 days late will be awarded a mark of zero.
2. Submission via email is not acceptable.
3. Assignments without reports will not be marked.
4. Not being able to answer to tutor's questions (regarding the website) or not being able to change your program, based on the tutor's requests may result in the deduction of marks for the assignment.
5. Enquiries about the marks can only be made within a maximum of 1 week after the assignment results are published.
6. By submitting this assignment, you declare that this assignment is **Your own work and you did not collaborate with or copy from others.**

Assessment Criteria		Total Marks	Given Marks
1.	Structure/Documentation	2	
2.	Interface	6	
3.	Functionality	8	
4.	Presentation and answers to tutor's questions	5	
5.	<i>Moodle Quiz 2 (individual)</i>	4
