

Name: Lee Pui Kwan Benjamin
Student Number: 8942663
Email: pkbl992@uowmail.edu.au
Assignment number: ISIT307 Assignment 2

Requirements:

1. Install XAMPP and start the Apache and MySQL from the control panel.
2. Copy the project folder into htdocs directory (e.g. C:\xampp\htdocs\myrecordingstudio\).
3. Open localhost/phpmyadmin and go to the import tab and import myrecordingstudio.sql from the database folder. This creates the database and its tables as well as inserting test data.

User accounts username and password:

Admin: admin@myrecordingstudio.com admin123

User 1: user1@gmail.com password

User 2: user2@hotmail.com password

Files and Folders:

database:

myrecordingstudio.sql: exported database with schema and test data

config:

Database.php: a PDO singleton connection wrapper where all connection details such as host, database, name and credentials are located

includes:

header.php: Shared page header

footer.php: Shared page footer

bootstrap.php: This is included at the top of every page as it sets the timezone, starts the session, loads every class, sends no-cache headers and defines shared auth helpers.

assets:

[location-autocomplete.js](#): Shared JavaScript that powers the live location search box and is reused by the booking forms

css:

style.css: Stylesheet used by files that requires it

classes:

Administrator.php: Used for type identity where the admin actions are used in Location.php and Booking.php

Booking.php: Handles all booking logic including validating operating hours and duration, checking for time overlaps and determining if a booking is pending, active or completed.

Client.php: Represents a client account and provides methods to retrieve the client's upcoming and completed sessions

Location.php: Lists all/available/fully booked locations and searches locations by ID or description

Studio.php: Bookable room within a location and generates its display name and finds an available studio to auto-assign when a booking is made

User.php: The abstract base class for admin and client accounts by handling registration, login, logout and shared validation

root:

admin_booking_manage.php: Creates bookings on behalf of the client and lists the bookings with a Pending / Active / Cancelled / Completed status

admin_client_list.php: Lists all clients and clients with an active booking

admin_create.php: Creates a new admin account

ajax_location_search.php: AJAX endpoint that powers the live location search box on the booking forms

booking_cancel.php: Cancels a booking and the feature is blocked when the session has started

booking_create.php: Books a studio at a chosen location, date and time.

booking_edit.php: Modifies existing booking date, time or duration. Is used by both the client and admin.

booking_list_completed.php: Allows clients to view past completed sessions.

booking_list_upcoming.php: Allows clients to view current and future upcoming sessions and also allows the clients to modify or cancel them.

index.php: Landing page that shows different links depending on who logs in (client/admin)

location_create.php: Admin is able to create a new location

location_edit.php : Admin is able to edit an existing location's details

location_search.php: A standalone search page where the user enters a location ID and/or description where partial matching also works and clicks search to see matching locations.

login.php: Login form that verifies credentials and starts the session

logout.php: Destroys the session and redirects to login

register.php: Self registration for clients to create an account

Database Tables:

users

One row per account, client or admin.

- user_id: INT, PK, auto-increment -> Unique identifier.
- name: VARCHAR(100) -> Full name.
- phone: VARCHAR(20) -> Numeric only, max 8 digits, enforced in PHP.
- email: VARCHAR(100), UNIQUE -> Login credential. Domain rules differ by type (webmail for clients, company domain for admins).
- password: VARCHAR(255) -> Bcrypt hash — never plain text.
- type: ENUM('admin','client') -> Determines role and permitted actions.

- created_at: TIMESTAMP -> Row creation time, defaults to now.

locations

One row per bookable site.

- location_id: INT, PK, auto-increment -> Unique identifier.
- description: VARCHAR(255) -> Display name of the location.
- num_studios: INT, CHECK > 0 -> How many studio rooms this location has.
- cost_per_hour: DECIMAL(8,2), CHECK >= 0 -> Hourly rate applied to every booking at this location.

studios

One row per physical room within a location.

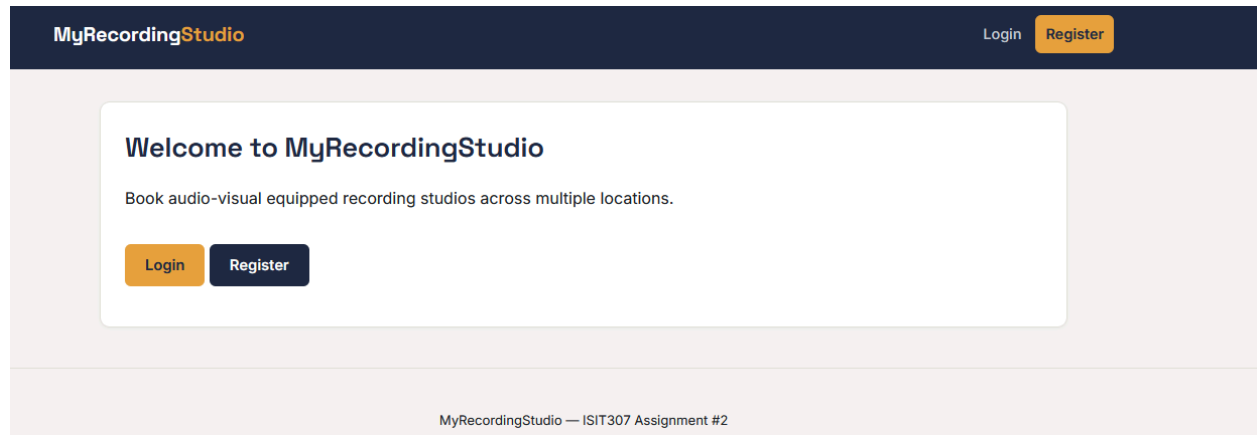

- studio_id: INT, PK, auto-increment -> Unique identifier.
- location_id: INT, FK -> locations -> Which location this room belongs to. Cascades on delete.
- studio_number: INT -> 1, 2, 3... within that location.

bookings

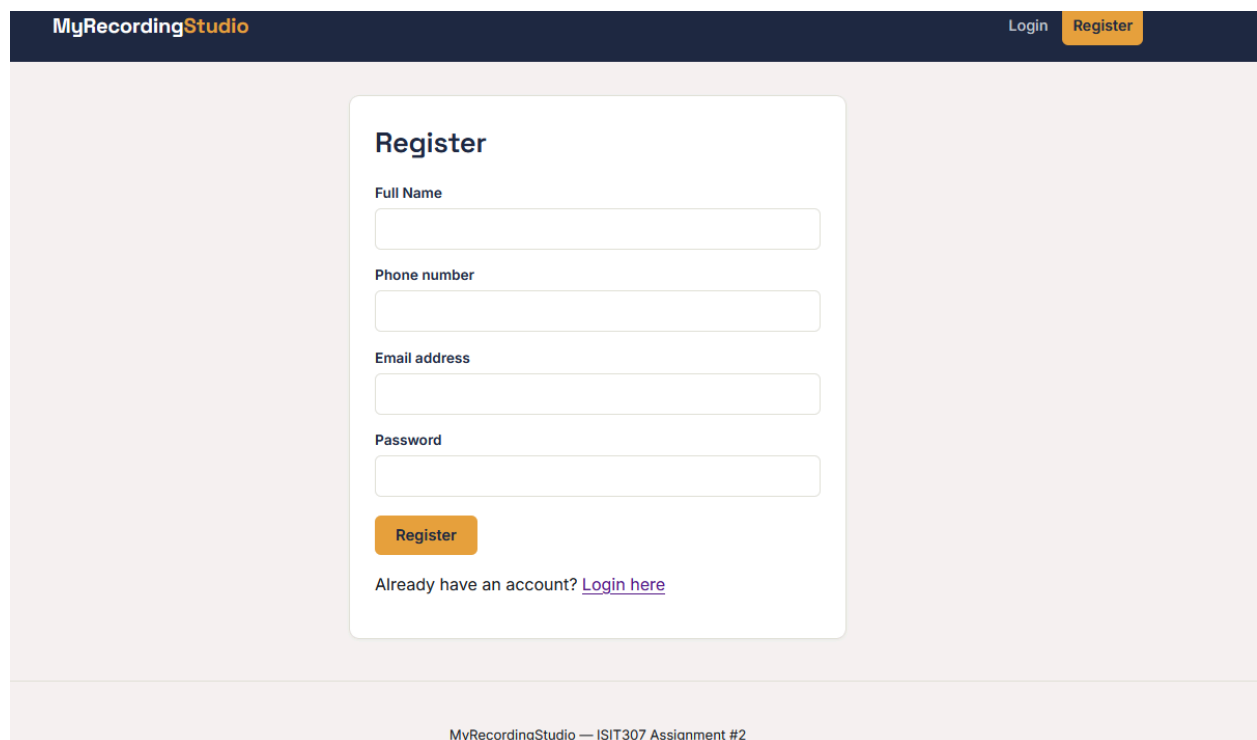

One row per booking made by a client.

- booking_id: INT, PK, auto-increment -> Unique identifier.
- studio_id: INT, FK -> studios -> Which specific room was booked. Cascades on delete.
- client_id: INT, FK -> users -> Which client made the booking. Cascades on delete.
- booking_date: DATE -> Session date.
- start_time / end_time: TIME -> Session window. CHECK constraints enforce 10:00–22:00.
- duration_hours: INT, CHECK 1–12 -> Session length in hours.
- total_cost: DECIMAL(8,2) -> duration_hours × the location's cost_per_hour at booking time.
- status: ENUM('active','cancelled') -> Whether the booking is still valid.
Pending/Active/Completed are computed live from the current time, not stored.
- created_at: TIMESTAMP -> Row creation time, defaults to now.

Screenshots:

The main page which shows both the login and register button.

When registering an account, the client will be redirected to the register page to fill in their details such as their Name, Phone number, Email address and their Password. Once they have finished registering a new account, the client would then be redirected to the login page.

MyRecordingStudio — ISIT307 Assignment #2

The client is also able to search for a specific location via ID or by the description instead of just showing a list.

When the admin logs in, they are shown a different UI as compared to the client where they will manage the clients and their bookings as well as adding in a new location and studios or modifying an existing one.

The admin can view all locations and locations with an available studio exactly like the client but are also able to view fully booked locations. The admin can also edit a location to change the description, the number of studios and the cost per hour of the studio

The admin is able to view all clients and can filter with currently active to view the clients with an active booking.

The screenshot shows the 'Add Administrator' form within the MyRecordingStudio application. The form is centered on a light pink background. It includes a title 'Add Administrator', a note about staff accounts, and four input fields for 'Full Name', 'Phone number', 'Email (@myrecordingstudio.com)', and 'Password'. An orange 'Create Administrator' button is at the bottom of the form. The top navigation bar is dark blue with links to various sections, and the footer shows the page title 'MyRecordingStudio — ISIT307 Assignment #2'.
